

Question: Sheet AF601 on materials legend indicates there is a deductive alternate shown on AD101-W*. I can't locate this sheet.

Answer: Finishes for Alternate Deduct 2 referenced on AF-601 are identified on Sheet AF101-W. The reference to sheet AD101-W was incorrect.

Question: "It appears that the drawings and specifications do not indicate the size of the existing line in 210 and 211 that the new fire sprinkler system is to be connected to. Will it be necessary to issue the existing fire sprinkler drawings of Buildings 210 and 211 in order for the Contractor to clearly understand the existing pipe layout to make these connections?"

Answer: "It should not be necessary to issue existing fire sprinkler drawings of Buildings 210 and 211 for the Contractor to clearly understand the existing pipe layout and to make new connections. CLC Common Area Connector sheet FX100/TANK ROOM BLDG 210 clearly indicates the new fire suppression wet-pipe sprinkler main connection location and size, existing fire suppression main location and size at the point of new connection, and the path of the new fire suppression main to extend and serve the new CLC Common Area Connector. The Contractor is encouraged to refer also to CLC Common Area Connector sheet FX101 for additional information regarding extension of the new fire suppression main piping into the new CLC Connector Mechanical Room to serve the three new CLC Common Area Connector fire suppression zones. The Building 211 fire suppression system should in no way serve the CLC Common Area Connector fire suppression sprinkler system."

Question: The pre-solicitation notice stated bid opening would be at 1:00pm on February 6, 2014.

Answer: This is incorrect and amendment will clarify that. The bid opening time is currently scheduled for February 6, 2014, at 2:00 pm local time in Building 1, Room 121. The information contained in the solicitation documents is correct.
